

SPSP Networking Day - CAUTI

13 December 2016, thestudio, Glasgow

Lesley Shepherd, Nurse Consultant IPC Health Protection Scotland/Healthcare Improvement Scotland set out the national overview on UTI.

Jonathan O'Reilly, Patient Safety Improvement Advisor, NHS Lanarkshire shared the [NHS Lanarkshire whole system approach to reducing harm](#).

We asked delegates to tell us in terms of learning, which aspects of the event would they rate most highly?

- ⇒ Discussion and expansion of ideas to test
- ⇒ I liked the smaller numbers, seems to give more opportunity to network
- ⇒ World café - discussion - hear other ideas share with others - learn - network

Reducing CAUTI is a continued aim for the Acute Adult and HAI improvement programmes and this half day networking event focused on the ambition to reduce CAUTI across NHS Scotland by 30% by March 2017.

The aims of this day were for the delegates to:

- ⇒ Share the successes and challenges around the improvement work,
- ⇒ Learn about opportunities to improve outcomes and experience for patients, and
- ⇒ Network with colleagues from other NHS boards.

Three NHS boards delivered flash reports on current work in reducing CAUTI—NHS Orkney, NHS Dumfries & Galloway and NHS Highland.

Click on each flash report to view.

The world café generated a lot of discussion and ideas for delegates to take back to their teams within the NHS boards. Delegates were asked to think about three questions—see responses [here](#).

- ⇒ What are you doing within your CAUTI work to reduce catheter usage?
- ⇒ How are you using data to inform and drive your improvement?
- ⇒ How are you thinking about spread and sustainability of CAUTI work?
