

## Serial Prescription Information Sheet

The practice has issued you with a serial prescription. A serial prescription is a prescription for medicine(s) you need to treat a long-term condition. It looks like a normal prescription but lasts for 6 or 12 months.

Serial prescription(s) are kept in the community pharmacy and your GP decides how often they should be collected, e.g. every four weeks. Let your pharmacist know if you will need to collect your prescription earlier than normal or if you will need more than usual if, for example, you are going on holiday. Each time a prescription is collected, the pharmacist tells the doctor.

You will need to register for the service before the pharmacist can give you the medicines. Registration is simple and easy to do and your community pharmacist will help you.

The serial prescription can only be dispensed at the pharmacy where the registration has taken place.

At the end of the 6 or 12 month prescription, the pharmacist will ask you to sign the serial prescription form. At this point, the pharmacist can also request a new serial prescription from your GP. The doctor may prepare a new serial prescription without getting in touch but you may be invited into the practice for a review before getting your next serial prescription.

Even though a patient has a serial prescription, they can still make an appointment to see the doctor whenever they need to. However, please note that items prescribed to you which are not on serial prescriptions will still need to be ordered via your doctor.

The pharmacist may also tell you if you need to see the doctor if e.g. your condition starts to get worse.

Your doctor can stop medicines on your serial prescription if they need to. If this happens they will tell you and your pharmacist.

If you move to another doctor's surgery, you should let the old surgery know so they can cancel your serial prescription.
